

Techni NEWSLETTER

S Y S T E M S

Welcome to our latest Techni Systems newsletter. We will look back at what's gone on since the end of January up until to now. We'll also look ahead to what's coming up on the horizon.

CONVERSIONS

We've had plenty of vans come in over the last few months and leave our workshop with system installs and completed conversions. Here are a selection:

ISO 9001 CERTIFIED

We were proud to receive the recent news that Techni Systems has been awarded ISO 9001 certification.

ISO 9001 is the world's most recognised quality management system standard, with the latest revision coming in 2015.

To be awarded certification allows our customers to have confidence that we as an organisation have a system in place that meets their requirements.

LUTON VAN INSTALL

Courtesy of Farmers Tyre, we recently installed our compressed air system and conversion items onto a Luton van for the first time!

The install included adding a VOBB which has all of the under chassis components inside. This makes it a great option for vehicles which are low to the ground as it helps with ground clearance. VOBBs are also easy to move if the system needed to be provided to another vehicle.

SYSTEM DEMOS

We have travelled up and down the country demoing our engine mounted air compressor system to those who are interested and want to see what it's like first hand.

If you would like to see what our system is like up close, book your own demo today!

Just get in touch with our team and we'll arrange a date and time that suits you.

NEW WORKSHOP

We are up and running inside our new workshop!

Due to the growth of Techni Systems and the increased number of system installs and conversions for our customer base, we needed to expand our workshop capacity.

An opportunity arose to move into a new facility just over the road from Techni Systems HQ and with it became home to our new workshop.

COMING UP

Techni Systems will once again be exhibiting at the IAA later this year.

The IAA is the leading trade fair for logistics, commercial vehicles, buses and the transportation sector around the globe.

The event is held in Hanover, Germany and runs between 17th – 22nd September.

We'll be located on Stand N57 which is based in the Open Air Section and situated right next to Hermesturm tower. Our team will be showcasing our system, highlighting where system parts are positioned and how it operates. We will have pneumatic tools setup so people can have a go at seeing how powerful and efficient the system is.

We'll be on hand to answer any questions you may have, so if you're coming to the event please stop by and say hello!

If you would like more information about the IAA, please contact us via email or give us a call using the details below.

SMALL STORAGE AND PARTITIONS

We can install small storage units on board your vehicle. The units vary in height and include 4 or 5 drawers which vary slightly in size.

We can also install a choice of two partitions - a full width partition or a second bulk head partition.

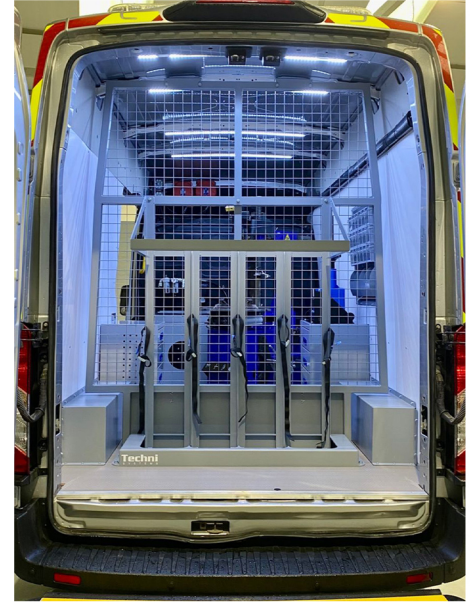

Here are several examples as part of a conversion we've completed:

Short 4 Drawer Unit

Tall 4 Drawer Unit with Bottom Void

Full Width Partition

To check out our full range of small storage units and partitions, just click [HERE](#).
