

Techni NEWSLETTER

S Y S T E M S

Welcome to our latest Techni Systems newsletter.
We will look back at what's gone on since the end of last year up until now.

CONVERSIONS

We've had plenty of vans come in over the last few months and leave our workshop with system installs and completed conversions. Here are a selection:

Contact Us For A Quote

HEADQUARTERS MOVE

At the start of March, our Sales and Marketing team said goodbye to the unit based on Featherbed Lane and joined our Techni Ltd colleagues at our main headquarters located at Sundorne Trade Park.

The move has proved to be beneficial in many ways for everyone involved. It has made collaborating and communicating between different departments much easier. The move also means that our team are now based closer to our bigger workshop just over the road.

SYSTEM DEMOS

Ben and Jess have been busy travelling around the country to provide demonstrations of how our compressed air systems can benefit businesses. One of the trips our dynamic duo ventured on was a tour of Scotland where we're pleased to say they developed relationships with people who are now current customers.

Our system demos are free with no obligation and we come to you at no extra charge. If you would like to see what our system is like up close, book your own demo today. Just get in touch with our team and we'll arrange a date and time that suits you.

MODUVAN VISIT

At the end of March, several of our Techni Systems team headed out to Kortemark in Belgium to visit one of our European installation partners, Moduvan.

Moduvan are experts in bespoke vehicle conversions who install racking, lighting, branded signage, tyre changers and more. Having been an installation partner now for over 7 years, it was great to catch up with many of their team. We look forward to continuing our journey with them.

NEW VEHICLE COMPATIBILITY

We recently announced that we now have a VR40 engine mounted compressed air system for the new Renault Master / Nissan Interstar FWD 2.0L 2025> Euro 6C.

The VR40 system is ideal for vehicles in the commercial tyre fitting and utility industries. It's also a great choice for forklift repair and on-site maintenance vehicles.

3D COMPUTER SOFTWARE

Check out our video showcasing how we use 3D computer software to create digital image designs of van conversions.

The software allows our team to create a preview of what customers want their completed conversion to look like. Our team can then go back and forth with them to make any amendments should the customer change their mind about how they want their conversion to look.

CONVERSION SPOTLIGHTS

Over the last few months we highlighted two more of our fit outs in a Conversion Spotlight. Conversion Spotlights showcase individual items we are able to install which gives you a great idea for what we can do for your vehicle.
